

A specimen page after the model of Duden's *Deutsches Universalwörterbuch* entry-anatomy spread: real entries re-typeset from the Cologne digital text, every microstructural element labelled. Entries: the three homographs of *heman* with the *hema-* compound run, and the three homograph roots *gup* with participles.

हेमन् 3. *heman*, n. (of doubtful derivation) gold, Naigh. i, 2; Mn.; MBh. &c.; a gold piece, Kathās.; (pl.) golden ornaments, Kuval.; Mesua Roxburghii, Car.; the thorn-apple, MW.

1. **Hema**, in comp. for 3. *heman*. — **kaksha**, m. a golden girdle, Vās.; mf(ā)n. having g° walls, R.; = next, MBh. — **kakshya**, mfn. having a g° girdle, R. — **kaṇṭha**, m. a proper N., Cat. — **kandala**, m. having g° shoots, coral, L. — **kamala**, n. a g° lotus, Kathās. — **kampana**, m. N. of a man, MBh. — **ka-ra**, m. 'g°-worker,' N. of Śiva, ib.; (with *maithila*) N. of an author, Cat. — **karaka**, m. a g° vase, L. — **karṭri**, m. a goldsmith, Mn. xii, 61; a kind of bird, MW. — **kalāṣa**, m. a g° pinnacle or cupola, Inscr. — **kānti**, mfn. having a g° lustre, VarBṛS.; f. *Curcuma Aromatica* or another species, L. — **kāra**,

Typeset from the Cologne Digital Sanskrit Dictionaries source (csl-orig v02) · facsimiles: Cologne scan server · built by build_entry_anatomy.py · Fable 5 (claude-fable-5), 12-07-2026 · Cologne Sanskrit-Lexicon: sanskrit-lexicon.uni-koeln.de

W text (Cologne, csl-orig v02) following the 1899 print conventions; (1899) is the standard English-language Sanskrit dictionary: two-ssed citations, and very long compound runs. The lemma family n page — compare how the two traditions treat identical material. d to IAST here; the facsimile shows the original.

The column re-typesets entries from the digital MW text (Cologne, csl-orig v02) following the 1899 print conventions; each label explains one element. Monier-Williams (1899) is the standard English-language Sanskrit dictionary: two-script headwords, etymological grouping, compressed citations, and very long compound runs. The lemma family (*heman*, *gup*) is the same as on the PWG specimen page — compare how the two traditions treat identical material. MW's own transliteration (kaksha, ri) is modernised to IAST here; the facsimile shows the original.
