

Anatomy of a CDSL record — the Cologne digital markup

The companion page to the PWG and MW specimen pages: what the *digital* record looks like underneath. Three real records shown raw and rendered, every markup element labelled.

CSL-ORIG · V02 · PWG.TXT + MW.TXT

Exhibit 1 — a PWG record (hemán ‘impulse’)

<L> record number — the stable unique id of the record in the Cologne digitization (not in the print)

<pc> print locus: volume–column for PWG (7-1655), page,column for MW — the bridge back to the scan

<k1> = key1, the normalized lookup key in SLP1: no accents, no compound marks — use it for matching, dedup, joins

<k2> = key2, closer to the printed form: keeps the udātta accent (hema/n) and, in MW, compound dashes (hema—kakza) — use it for citation and editorial review

<h> homograph number in the key line; <hom> in the body is its printed counterpart

{#...#} Sanskrit text in SLP1 — a strict one-character-per-phoneme ASCII encoding; rendered to Devanāgarī or IAST (table below)

Accent characters: / = udātta; in saṃhitā quotations \ and ^ mark the anudātta bar and svarita stroke of the print

{%...%} italics of the print — in PWG that is the German definition text

| headword/body divider — everything before it is the lemma as printed, everything after is the article

<ls> literature source; when the source repeats, <ls n="..."> carries the silently-omitted part, so ‘9,97,1’ expands back to the full reference

```
<L>117557<pc>7-1655<k1>heman<k2>hema/n<h>1<hom>1.</hom> {#hema/n#}| (von <hom>1.</hom> {#hi#}) <lex>m.</lex> [%Antrieb%]: {#a\sya pre\zA he\manA^ pU\yamA^naH#} <ls>RV. 9,97,1</ls> . nach <ls>SĀY.</ls> {%GoLd%}; aus dieser Stelle vielleicht die <ab>Bed.</ab> {%Wasser%} geschlossen <ls>NAIGH. 1,12</ls> .<div n="v">— <ab>Vgl.</ab> {#ASu"#}.<LEND>
```

RENDERS AS

1. हेमन् (von 1. हि) m. *Antrieb*: अस्य प्रेषा हेमनां पूयमानः RV. 9,97,1. nach SĀY. *Gold*; aus dieser Stelle vielleicht die Bed. *Wasser* geschlossen NAIGH. 1,12. — Vgl. आशु.

Exhibit 2 — an MW record (root 1. gup) with its machine layer

```
<L>65898<pc>358,3<k1>gup<k2>gup<h>1<e>1<hom>1.</hom> <s>gup</s> | <ab>cl.</ab> 4. <ab>P.</ab> <s>°pyati</s> (<ab>p.</ab> <ab>Ā.</ab> <s>gupyamAna</s>, in <lang>Prākṛt</lang> <i>guppam°</i> <ls>Jain.</ls>), to become perplexed or confused, <ls>Dhātup. xxvi, 123.</ls><info westergaard="gupa,26.123,04.0131"/><info verb="root" cp="4P,4Ā"/><LEND>
```

RENDERS AS

गुप् 1. gup cl. 4. P. °pyati (p. Ā. gupyamāna, in *Prākṛt guppam* ° JAIN.), to become perplexed or confused, DHĀTUP. XXVI, 123.

Exhibit 3 — one printed entry, several records (MW 3. heman)

```
<L>264121<pc>1304,2<k1>heman<k2>heman<h>3<e>1<hom>3.</hom> <s>heman</s> | <lex>n.</lex> (of doubtful derivation) gold, <ls>Naigh. i, 2</ls>; <ls>Mn.</ls>; <ls>MBh.</ls> &c.<info lex="n"/><LEND><L>264122<pc>1304,2<k1>heman<k2>heman<e>1A| a gold piece, <ls>Kathās.</ls><info lex="inh"/><LEND>
```

RENDERS AS

हेमन् 3. heman n. (of doubtful derivation) gold, NAIGH. I, 2; MN.; MBH. &c.; a gold piece, KATHĀS.

The SLP1 ASCII transliteration (non-trivial mappings)

SLP1	A	I	U	f	F	x	E	O	M	H	N	Y	w	q	R	T	D	S	z	G
IAST	ā	ī	ū	ṛ	ṝ	ḷ	ai	au	m̐	ḥ	ṇ	ñ	ṭ	ḍ	ṇ	th	dh	ś	ṣ	gh

<e> typographic level of the headword in the 1899 MW print: 1 = main entry with Devanāgarī, 2 = subordinate roman-only entry, 3 = run-on compound; a letter suffix (1A, 2B) = continuation segment of the same entry

<ab> abbreviation (cl., P., Ā., mfn., ifc. ...); <lex> carries the gender/part-of-speech label

<lang> language label — here flagging a Prākṛt form inside the Sanskrit entry

<info> machine layer — modern enrichment absent from the print: parsed gender sets, Whitney-roots and Westergaard cross-links, verb class/pada codes. Consume these before re-deriving anything

<LEND> record terminator — records are a flat streamable sequence, one headword segment each

One printed entry ≠ one record: each sense block of MW’s ‘3. heman’ is its own record; the |-initial body and the <e> letter suffix (1A) mark the continuation — join on k1 + adjacency to rebuild the printed paragraph

Round-trip check: the two records above reassemble into the single print paragraph, senses joined by semicolons

Where the records come from: Monier-Williams 1899, p. 1304 — the ‘3. heman’ entry of Exhibit 3 as printed. Scan: Cologne Sanskrit-Lexicon.

The Cologne record model

All ~40 dictionaries of the Cologne Digital Sanskrit Dictionaries (CDSL) share this markup: a flat sequence of <L>...<LEND> records, headword keys in SLP1, print-faithful body markup, and a growing machine layer. The same tag inventory you see here reads PWG (German, 1855–75) and MW (English, 1899) alike — which is what makes cross-dictionary tooling possible. Canonical sources: [sanskrit-lexicon/csl-orig](#) (this text), [the Cologne portal](#) (lookup + scans).

Typeset from the Cologne Digital Sanskrit Dictionaries source (csl-orig v02) · facsimiles: Cologne scan server · built by build_entry_anatomy.py · Fable 5 (claude-fable-5), 12-07-2026 · Cologne Sanskrit-Lexicon: [sanskrit-lexicon.uni-koeln.de](#)
